

# **BIOLOGY 1114**

## **GENERAL BIOLOGY**

### **INTERNET PROJECT**

Your assignment is to run through the Virtual Experiment entitled, “Which Pest Control is Best for Basil?” at [http://www.mhhe.com/biosci/genbio/tlw3/virtual\\_labs/lab17/home.html](http://www.mhhe.com/biosci/genbio/tlw3/virtual_labs/lab17/home.html). This link is also provided on the lower right-hand side of the webpage, under “Links to Textbooks and Multimedia Material” at <http://www.metabolism.net/bidlack> (you can also find this link at <http://biology.ucok.edu/bidlack>). You will need to go through the different links at the Virtual Experiment site and familiarize yourself with the investigation. Once you understand the material, run the Virtual Experiment and learn about pest control in basil.

After running the Virtual Experiment, print the Original Research Paper (found at a link at the main website) and read it.

Write a report about what you learned from this website, the Virtual Experiment, and the Original Research Paper. Your report should be typed, single-spaced, and about 1 page in length.

Grading will be based on:

1. The quantity and quality of information you present about biology.
2. Grammar, spelling, punctuation, and proper use of the English language.
3. Unique information and entertainment value of your paper.

To turn in this Internet Project, you will need to include your report (first page) and a copy of the Original Research Paper stapled to your report as evidence of visiting the website.
