

CELL PHYSIOLOGY Special Lecture - Calculations for pH and  $\Delta G$  (Part III)

## I. pH problem for an amino acid:

Using pK values of glycine for the  $\alpha$ -COOH as 2.4 and the  $\alpha$ -NH<sub>3</sub><sup>+</sup> as 9.8, determine the pH of:

a) A mixture of equal volumes of 0.10 M glycine and 0.05 M NaOH

$$\begin{array}{l} \text{HGly} \rightleftharpoons \text{H}^+ + \text{Gly} \\ \begin{array}{c} S \\ E \end{array} \begin{array}{c} 0.10 \\ (0.10 - 0.05) \end{array} \quad \begin{array}{c} 0 \\ (0.05) \end{array} \quad \begin{array}{c} 0 \\ (0.05) \end{array} \end{array} \quad \text{pH} = 9.8 + \log \frac{0.05}{0.05} = \underline{\underline{9.8}}$$

b) A mixture of equal volumes of 0.10 M glycine and 0.05 M HCl

$$\begin{array}{l} \text{H}_2\text{Gly} \rightleftharpoons \text{H}^+ + \text{HGly} \\ \begin{array}{c} S \\ E \end{array} \begin{array}{c} 0.10 \\ (0.10 - 0.05) \end{array} \quad \begin{array}{c} 0 \\ (0.05) \end{array} \quad \begin{array}{c} 0 \\ (0.05) \end{array} \end{array} \quad \text{pH} = 2.4 + \log \frac{0.05}{0.05} = \underline{\underline{2.4}}$$

## II. Use of free energy to calculate ratio of metabolites in a reaction:

The following reaction is catalyzed by the enzyme phosphoglycerate kinase:

The  $\Delta G^\circ$  for this reaction is  $-4.5$  kcal/mol. Assuming that the value of  $[\text{ATP}]/[\text{ADP}]$  is 10 and the temperature is  $25^\circ\text{C}$ , calculate the concentration ratio of 3-phosphoglycerate to that of 1,3-bisphosphoglycerate at equilibrium.

$$K_{\text{eq}} = \frac{[3\text{-PGA}][\text{ATP}]}{[1,3\text{diPGA}][\text{ADP}]}$$

Use:  $\Delta G^\circ = -2.3RT \log K_{\text{eq}}$   
or  $\log K_{\text{eq}} = \frac{-\Delta G^\circ}{2.3RT}$

$$\textcircled{1} \log K_{\text{eq}} = \frac{+4500 \text{ cal/mol}}{(2.3)(1.987 \text{ cal/degree}\cdot\text{mol})(298 \text{ K})}$$

$$\textcircled{2} \log K_{\text{eq}} = 3.30; \quad K_{\text{eq}} = 2.015 \times 10^3$$

$$\textcircled{3} 2.015 \times 10^3 = \frac{[3\text{-PGA}]}{[1,3\text{diPGA}]} \quad (10)$$

$$\textcircled{4} \frac{[3\text{-PGA}]}{[1,3\text{diPGA}]} = \underline{\underline{201.5}}$$
